[4].

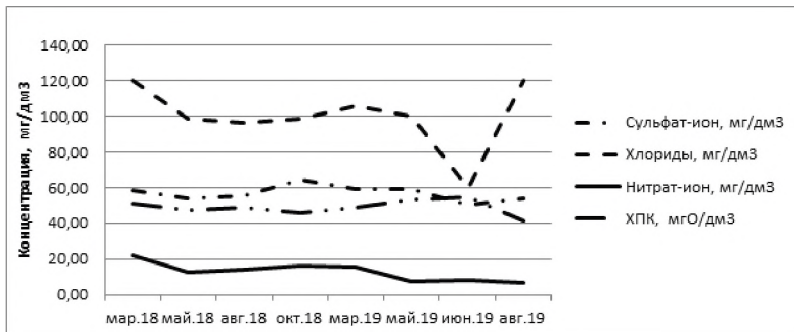

[3].

One of the priority direction of the "Strategy for the socio-economic development of the Belgorod Region for the period until 2025" is the formation of a competitive tourist and recreational cluster with the efficient use and preservation of tourist and recreational resources of the region [4]. As the main structural elements of the resource and recreational potential of the region, one can consider water objects - rivers and reservoirs, which are of great environmental importance for the low-water Belgorod region [3].
